

Project Executable Files

Date	12 July 2026
Team ID	6a2fbf036b1ed0bd8fa789aa
Project Name	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes/No/NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA — web application only
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
/ai-debt-relief-platform
/backend
  /app
    /routers - auth.py, loans.py, settlement.py, negotiation.py,dashboard.py
    /models - user.py, loan.py, settlement.py,negotiation_history.py
    /schemas - Pydantic request/responsemodels
    /services -
      financial_engine.py,gemini_client.py,fallback_logic.py,main.py -
      FastAPI application entry point
    requirements.txt - Pythondependencies
    .env.example - Sample environmentconfiguration
  /frontend
    /src
      /components -Reusable UI components (Card, Chart,Modal)
      /pages - Login, Dashboard, SettlementPredictor,LetterGenerator
      /services -Axios API clientwrapper
      /hooks - Custom React
    hookspackage.json -
    Nodedependenciesvite.config.js
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://ai-debt-relief-platform.onrender.com (staging environment)
Login Credentials (Demo)	Username: demo@debtreliief.com Password: Demo@1234
Platform / Hosting Provider	Render (FastAPI backend, Dockerized) + Vercel (React frontend)
Repository Link	https://github.com/sb-dr-01/ai-debt-relief-platform
Demo Video Link	https://drive.google.com/file/d/ai-debt-relief-demo-video (placeholder — update with final link)

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:
Python 3.11+, Node.js 18+, npm, Git, and a Google Gemini APIkey

Step 1: Clone the repository: git clonehttps://github.com/sb-dr-01/ai-debt-relief-platform
Step2:Backendsetup:cdbackend,python-mvenvvenv,sourcevenv/bin/activate(orvenv\Scripts\activateon Windows),
pip install -r requirements.txt
Step3:Configureenvironment:copy.env.exampleto.envandsetGEMINI_API_KEYandJWT_SECRET_KEY Step 4:
Initialize the database: python init_db.py (creates SQLite tables)
Step5:Startthebackend:uvicornapp.main:app--reload--port8000 Step
6: Frontend setup: cd frontend, npm install, npm run dev
Step 7: Open the browser athttp://localhost:5173(frontend), with the API available athttp://localhost:8000

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	AI negotiation letter generation can take 3–5 seconds under high Gemini API latency.	Rule-based fallback logic automatically triggers after a 5-second timeout.
2	Lender response status is not yet automatically tracked.	Planned for a future release; currently updated manually by the borrower.
3	SQLite may face write contention under many concurrent users.	Migration to PostgreSQL is planned before production launch.
